

**“The most expensive hospital is the one that fails.”**

*-2008-2009 World Disaster Reduction Campaign.*

## Onsite Water Resiliency Services

- System wide water resiliency program planning
- Emergency & alternative water supply system design & engineering
- Installation, Maintenance, Remote Monitoring

## Onsite Proven Experience

- 94+ Vulnerability and Opportunity Assessments
- 60+ System Designs and Installations
- 45+ Cities Across United States

## Prepare

It isn't a question of **IF** a water disruption will occur; it is a question of **WHEN** and how long the disruption will last.

- Avoid costly operational failures & evacuations
- Comply with on-site emergency water supply requirements
- Extreme weather threatens municipal water distribution
- You have an electric generator - why not a “water generator?”

## Save

Installing alternative water supply systems results in impactful water and cost savings!

Installing emergency or alternative water supply systems can:

- Reduce your monthly utility bill
- Increase your independence from municipal water supplies
- Meet water use reduction mandates
